

E-COMMERCE LAUNCH PROPOSAL

Rosabella TLV

From boutique floor to online storefront — lean, automated, on-brand.

PREPARED FOR	Rosabella TLV — multi-brand fashion boutique
LOCATION	Shabazi 31, Neve Tzedek, Tel Aviv
AUDIENCE	11,000 Instagram followers
PREPARED BY	Alan — AI Consulting · Target launch: April

01 · PROJECT OVERVIEW

A boutique-grade online store, without the agency overhead

Rosabella TLV has what most online shops spend years chasing: a curated multi-brand collection, a storefront in one of Tel Aviv's most-walked streets, and an engaged audience of 11,000 Instagram followers. What's missing is a way for that audience to buy when they aren't standing on Shabazi Street.

This proposal covers the design, build, and launch of a Shopify store for Rosabella TLV, wired together with lightweight automation so day-to-day operations stay manageable for a small team. The goal is simple: turn Instagram attention into orders, keep inventory honest between the floor and the site, and do it with no money down — no build fee, no bloated retainers, no six-month roadmaps. I get paid out of what the store earns, or not at all.

What success looks like

- A live, mobile-first Shopify store carrying the boutique's curated look.
- Instagram bio and posts linking to shoppable product pages.
- Inventory synced from a simple CSV workflow the team can run weekly.
- Order, shipping, and follow-up messages sent automatically via WhatsApp and email.
- A store the team can run independently after a single handover session.

02 · TIMELINE ESTIMATE

Two to three weeks of focused build

The build is scoped for **2–3 weeks** end-to-end. Week 3 is a buffer: it absorbs content delays (photography, product copy, supplier data) rather than extending the technical work.

Phase	Focus	Deliverables
Week 1 Foundation	Discovery answers locked, Shopify Basic account, theme selection & brand styling, domain + payments (credit cards / Bit as available via provider)	Styled storefront skeleton, payment test order
Week 2 Catalog & automation	CSV inventory import, collections by brand, Zapier flows for orders & notifications, WhatsApp + email templates	Populated catalog, working automations end-to-end
Week 3 Polish & launch (buffer)	QA on mobile, checkout & shipping rules, Instagram Shopping link-up, team training, go-live	Launch checklist signed off, store live

Assumes product photos and prices are available by end of Week 1 — the discovery questions on the final page de-risk exactly this.

03 · TECH STACK RECOMMENDATION

Shopify Basic + Zapier: small stack, big leverage

For a single-location boutique with a curated catalog, the right stack is the smallest one that does the job. I'm recommending **Shopify Basic** as the storefront and **Zapier** as the automation glue — both proven, both replaceable, neither requiring a developer on retainer.

Component	Choice	Why this one
Storefront	Shopify Basic	Best-in-class checkout, native Instagram/Facebook Shopping integration, Hebrew/RTL-capable themes, CSV product import built in. Basic tier covers everything a single boutique needs.
Automation	Zapier	Connects Shopify to WhatsApp, email, and Google Sheets without code. The team can see and edit every workflow — no black boxes.
Email	Shopify Email	Included with Shopify (10,000 sends/month free). Handles receipts, shipping updates, and simple campaigns. Klaviyo is the upgrade path if campaigns grow.
WhatsApp	WhatsApp Business	Free app to start; a Business-API provider (e.g. Wati or Twilio) can be added later for fully automated messages at scale.
Inventory bridge	Google Sheets + CSV	The team edits a familiar spreadsheet; a clean CSV flows into Shopify. No new software to learn.

04 · MONTHLY COST BREAKDOWN

Running costs, itemized

Third-party vendor costs after launch. Prices are current list prices in USD and worth re-verifying at signing; monthly-billing rates are slightly higher.

Vendor / Service	Plan	Monthly (USD)	Notes
Shopify	Basic (annual billing)	\$29	\$39 if billed monthly. Includes hosting, SSL, checkout, Shopify Email free tier.
Zapier	Professional (annual billing)	\$19.99	Covers multi-step Zaps for order + messaging automations. Free tier is enough during the build.
Domain	rosabellatlv.com (or .co.il)	~\$1.25	≈ \$15/year, billed annually.
WhatsApp Business app	—	\$0	Free tier to start; quick-replies + labels.
<i>Optional: WhatsApp API provider</i>	Wati / Twilio, if full automation is wanted	\$0–49	Only if message volume outgrows the free Business app.
<i>Optional: Klaviyo email</i>	Free tier to 250 contacts	\$0–20	Upgrade path for campaigns and flows beyond Shopify Email.
Core total		≈ \$50 / month	≈ \$99–119 / month with both optional add-ons

These are Rosabella's own accounts, paid directly to each vendor — they are not routed through me and not part of the revenue share described in the next section. Shopify payment processing fees (a percentage per transaction, varying by provider and region) sit outside this table.

05 · COMMERCIAL MODEL

No build fee — I take 25% of what the store earns

I am not charging for time. There is no hourly rate, no day rate, and no fixed build fee. I design, build, and launch the store at my own cost, and in exchange I take **25% of the revenue the store generates**. If the site earns nothing, I earn nothing.

How the 25% is calculated

Term	Definition
Basis	Net revenue from orders placed through the Shopify store.
Baseline	Zero. Rosabella has no online sales today, so every order the site takes is new revenue. In-store and walk-in sales are excluded entirely — I have no claim on the boutique's existing trade.
Deducted first	VAT, shipping charged to the customer, payment processing fees, and any refunds, returns, or chargebacks. The split applies to what actually settles.
My share	25% of that net figure. Rosabella keeps 75%.
Source of truth	Shopify's own admin reports — the same dashboard we both look at. No separate accounting and nothing for Rosabella to compile.
Paid	Monthly, within 14 days of month end, on the previous month's settled orders.
Term	12 months from public launch, renewable only by mutual agreement.
Early exit	From month 6 onward Rosabella can end the share by paying 3× the trailing three-month average. This caps the total exposure at any point.

What the split looks like in practice

Net monthly online revenue	My 25%	Rosabella keeps
NIS 10,000	NIS 2,500	NIS 7,500
NIS 25,000	NIS 6,250	NIS 18,750
NIS 50,000	NIS 12,500	NIS 37,500
NIS 100,000	NIS 25,000	NIS 75,000

Illustrative figures, not a forecast — actual volume depends on catalog size, pricing, and how hard the Instagram audience converts.

Why this model, honestly

- **Rosabella carries no build risk.** Nothing is owed for the design, build, or launch. If the store underperforms, the only money spent is roughly \$50/month of vendor subscriptions.
- **My incentive matches yours.** I am paid only when the store sells, so I am motivated to keep it converting rather than hand over the keys and disappear.
- **The honest trade-off:** if the store performs strongly, 25% across twelve months will come to more than a fixed build fee would have. That is the price of my carrying the build risk instead of Rosabella — and the early-exit clause exists so there is always a way to cap it.

What stays included for the whole term

The ongoing share is not passive. For as long as it runs I keep the store maintained: automation fixes, theme and checkout adjustments, catalog and import support, and a monthly review of what is converting and what is not. No separate support invoice.

06 · INVENTORY STRATEGY

CSV-first, with a scraping fallback

Primary path: the CSV workflow

Shopify imports products natively from CSV. I'll set up a Google Sheets master template — one row per product variant with brand, size, color, price, stock, and image link — mapped exactly to Shopify's import format. The weekly routine becomes: update the sheet, export, import. Ten minutes, no technical skills, and the sheet doubles as the boutique's stock ledger.

Where supplier line sheets exist (PDF or Excel), I'll build small AI-assisted converters that turn them into clean import rows — this is exactly the kind of unglamorous automation an indie AI builder is for.

Fallback: structured scraping, if needed

If some brands provide no usable product data — no line sheets, no spreadsheets — I can build targeted scrapers for those brands' public catalog pages to extract titles, descriptions, specs, and imagery into the same CSV format. Scope notes:

- Used only as a fallback, per brand, where no cleaner source exists.
- Respects each site's terms of service; product descriptions get rewritten in Rosabella's voice rather than copied verbatim.
- Scrapers are delivered as simple re-runnable scripts, so refreshing a brand's catalog next season is a one-command job.

07 · CUSTOMER COMMUNICATION WORKFLOW

WhatsApp + email, automated via Zapier

Israeli customers live on WhatsApp; email carries the transactional record. The store will use both, each where it's strongest, with Zapier moving data between Shopify and the messaging layer.

Trigger (Shopify)	Channel	Automated message
Order placed	Email	Branded confirmation with order summary (Shopify native).
Order placed	WhatsApp	Personal thank-you + pickup/delivery options, via Zapier.
Order shipped / ready	WhatsApp + email	Tracking link or 'ready for pickup at Shabazi 31'.
Delivered +3 days	WhatsApp	Fit check-in and gentle review ask.
Cart abandoned	Email	Reminder with the items left behind (Shopify native).
New arrivals (weekly)	Email	Short lookbook-style campaign mirroring the Instagram feed.
Customer replies on WhatsApp	WhatsApp (human)	Routed to the boutique's phone — automation opens the conversation, a person continues it.

Every automated message is written once, in Rosabella's tone, during Week 2 — Hebrew and English versions where relevant. Nothing sends that the team hasn't approved.

08 · NEXT STEPS

Path to an April launch

Working backwards from a first-week-of-April go-live, with the 2–3 week build placed to leave breathing room:

When	Milestone	Owner
This week	Rosabella reviews this proposal; 30-minute call to walk through the discovery questions (next page).	Both
Within 1 week	Answers in hand — revenue-share terms and scope signed. Shopify + domain accounts opened.	Alan
Early–mid March	Build Weeks 1–2: storefront, catalog import, automations.	Alan
Mid–late March	Week 3 buffer: QA, training session, content finishing.	Both
Last week of March	Soft launch to a small list; test orders end-to-end.	Both
First week of April	Public launch, announced to the 11K Instagram audience.	Both

After launch I stay available for a light support window — fixes and tweaks as real orders come in — before handing the keys over fully.

09 • BEFORE WE START

Five discovery questions for Rosabella

Answers to these five questions turn this proposal into a signed agreement and a locked timeline:

1. What inventory system does the boutique use today?

Point-of-sale software, a spreadsheet, or paper — this determines how the CSV master sheet gets its first fill and whether ongoing sync can be automated.

2. Do your suppliers provide line sheets?

Brand line sheets (PDF/Excel with products, SKUs, prices, images) let us skip manual data entry — and tell us whether the scraping fallback is needed at all.

3. What is the target launch date?

This proposal assumes the first week of April — confirming the exact date (and any events tied to it) locks the timeline.

4. How many Instagram posts go out per week today?

Current posting volume tells us how much shoppable content exists on day one and how to pace the new-arrivals email that mirrors the feed.

5. What are the budget constraints?

The build itself costs nothing up front, so this is about the roughly \$50/month of vendor subscriptions and whether the optional add-ons (WhatsApp API, Klaviyo) are affordable now or later — and whether a 25% revenue share is a shape the business is comfortable with at all.

Alan — AI Consulting

indie AI builder & consultant

Independent builder of small, sharp tools for real businesses. One person, full stack, no hand-offs — the person you talk to is the person who builds it.

Next step: a 30-minute call to run through the five questions above. Answers in hand, I'll send the signed revenue-share agreement and a dated plan for the April launch.
