

Work Proposal — E-Commerce Launch

Rosabella TLV · multi-brand fashion boutique, Shabazi 31, Neve Tzedek · 11,000 Instagram followers. Design, build, launch and ongoing operation of an online store — with nothing paid up front.

Project overview

Rosabella has exactly what most online shops spend years chasing: a curated multi-brand collection, a storefront on one of Tel Aviv's most-walked streets, and an audience of 11,000. **What's missing is a way for that audience to buy when they aren't standing on Shabazi Street.** This proposal covers the design, build and launch of a Shopify store wired to lightweight automation, so day-to-day operations stay simple for a small team — **no build fee and no retainer.**

What success looks like

- **A live, mobile-first store** — carrying the boutique's curated look.
- **Instagram that sells** — bio and posts linking straight to shoppable product pages.
- **Inventory you can trust** — synced from a simple CSV routine the team runs weekly.
- **Automated communication** — order, shipping and follow-up messages over WhatsApp and email.
- **Operational independence** — the team runs the store day-to-day while I maintain and improve it in the background.

Timeline

The build is scoped for two to three weeks end-to-end. Week 3 is a buffer: it absorbs content delays — photography, product copy, supplier data — rather than extending the technical work.

Phase	What happens	Duration
Week 1 · Foundation	Discovery answers locked · Shopify Basic account · theme selection and brand styling · domain and payments · test order	~5 days
Week 2 · Catalog and automation	CSV inventory import · collections by brand · Zapier flows for orders and notifications · WhatsApp and email templates	~5 days
Week 3 · Polish and launch	Mobile QA · checkout and shipping rules · Instagram Shopping link-up · team training · go-live	Buffer

Assumes product photos and prices are available by the end of Week 1 — the discovery questions at the end of this document exist to de-risk exactly that.

Tech stack

For a single-location boutique with a curated catalog, the right stack is the smallest one that does the job — proven, replaceable, and not requiring a developer on retainer.

Component	Choice	Why this one
Storefront	Shopify Basic	Best-in-class checkout · native Instagram and Facebook integration · Hebrew and RTL-capable themes · CSV product import built in
Automation	Zapier	Connects Shopify to WhatsApp, email and Google Sheets without code. The team can see and edit every workflow — no black boxes
Email	Shopify Email	Included (10,000 sends/month free) · receipts, shipping updates and simple campaigns · Klaviyo is the upgrade path

Component	Choice	Why this one
WhatsApp	WhatsApp Business	Free app to start · a Business API provider can be added later for automated messaging at scale
Inventory bridge	Google Sheets + CSV	The team edits a familiar spreadsheet; a clean file flows into Shopify. No new software to learn

Monthly costs

Third-party vendor costs after launch. These are Rosabella's own accounts, paid directly to each vendor — they are not routed through me and are not part of the revenue share.

Vendor	Plan	Monthly	Notes
Shopify	Basic (annual billing)	\$29	\$39 billed monthly · includes hosting, SSL and checkout
Zapier	Professional	\$19.99	The free tier is enough during the build
Domain	rosabellatlv.com	~\$1.25	≈ \$15/year
WhatsApp Business	App	\$0	Quick replies and labels
<i>Optional</i> · WhatsApp API	Wati / Twilio	\$0–49	Only if message volume grows
<i>Optional</i> · Klaviyo	Up to 250 contacts	\$0–20	For campaigns beyond Shopify Email

Core total: ≈ \$50/month · ≈ \$99–119 with both add-ons. Shopify payment processing fees (a percentage per transaction) sit outside this table.

Commercial model

I am not charging for time. **No hourly rate, no day rate and no build fee.** I design, build and launch the store at my own cost, and in exchange I take **25% of the revenue the store generates**. If the site earns nothing, I earn nothing.

Term	Definition
Basis	Net revenue from orders placed through the Shopify store.
Baseline	Zero. Rosabella has no online sales today, so every order the site takes is new revenue. In-store and walk-in sales are excluded entirely — I have no claim on the boutique's existing trade.
Deducted first	VAT · shipping charged to the customer · payment processing fees · refunds, returns and chargebacks. The split applies to what actually settles.
Split	25% to me · 75% to Rosabella.
Source of truth	Shopify's own admin reports — the same dashboard we both look at. No separate accounting and nothing for Rosabella to compile.
Paid	Monthly, within 14 days of month end, on the previous month's settled orders.
Term	Open-ended. The partnership runs for as long as the store operates — a stake in an asset that was built, not a project with an end date.
Sale of the share	From month 12 onward I may sell or transfer my share — to Rosabella herself or to a third party. Rosabella holds a right of first refusal: any outside offer is presented to her first, with 30 days to match it and buy the share herself.

What the split looks like in practice

Net monthly online revenue	My share (25%)	Rosabella keeps
₪10,000	₪2,500	₪7,500
₪25,000	₪6,250	₪18,750
₪50,000	₪12,500	₪37,500
₪100,000	₪25,000	₪75,000

Illustrative figures, not a forecast — actual volume depends on catalog size, pricing, and how hard the Instagram audience converts.

Why this model, honestly

- **Rosabella carries no build risk** — nothing is owed for the design, build or launch. If the store underperforms, the only money spent is roughly \$50/month of vendor subscriptions.
- **My incentive matches yours** — I am paid only when the store sells, so I am motivated to keep improving conversion rather than hand over the keys and disappear.
- **The honest trade-off** — this is a long-term partnership, not a one-off payment. If the store performs strongly, 25% over time will come to more than a fixed build fee would have. That is the price of my carrying the risk instead of Rosabella — and it is exactly why the right of first refusal exists, so she always has a way to buy the share and close the matter.

What stays included for the whole term

The ongoing share is not passive. For as long as the partnership runs I keep the store maintained: automation fixes, theme and checkout adjustments, catalog and import support, and a monthly review of what is converting and what is not — with no separate support invoice.

These commercial terms are an agreed framework and will be papered in a formal agreement before work begins. Each side should have their own lawyer review it.

Inventory strategy

Primary path: the CSV workflow

Shopify imports products natively from CSV. I'll set up a Google Sheets master template — one row per variant with brand, size, color, price, stock and image link — mapped exactly to the import format. The weekly routine becomes: update, export, import. Ten minutes, no technical skills, and the sheet doubles as the boutique's stock ledger.

Where supplier line sheets exist (PDF or Excel), I'll build small AI-assisted converters that turn them into clean import rows.

Fallback: structured scraping, if needed

If some brands provide no usable product data, I can build targeted scrapers for their public catalog pages to extract titles, descriptions, specs and imagery into the same CSV format. Scope notes:

- Used only as a fallback, per brand, where no cleaner source exists.
- Limited to public pages and product data — no competitor pricing and no personal information.
- Subject to each site's terms of use; if a brand forbids it, we fall back to manual entry for that brand.
- Output is always reviewed by hand before it goes live.

Customer communication

In Israel WhatsApp is the default channel and email is the formal backup. Both are wired to Shopify events through Zapier, so no customer is left without a reply — and nobody on the team has to remember to send.

Trigger	Channel	Message
Order placed	Email	Branded confirmation with order summary
Order placed	WhatsApp	Personal thank-you with pickup or delivery options
Shipped / ready	WhatsApp + email	Tracking link or 'ready for pickup at Shabazi 31'
Delivered +3 days	WhatsApp	Fit check-in and a gentle review ask
Cart abandoned	Email	Reminder with the items left behind
New arrivals (weekly)	Email	Short lookbook-style campaign mirroring the Instagram feed
Customer replies	WhatsApp (human)	Routed to the boutique's phone — automation opens the conversation, a person continues it

Every message is written once, in Rosabella's voice, during Week 2 — in Hebrew and English where relevant. Nothing sends that the team hasn't approved.

Next steps

When	Milestone	Owner
This week	Review the proposal · 30-minute call on the discovery questions	Both
Within 1 week	Partnership terms and scope signed · accounts opened	Alan
Early–mid March	Build weeks 1–2: storefront, catalog, automations	Alan
Mid–late March	Buffer week: QA, training, content finishing	Both
Late March	Soft launch to a small list · test orders	Both
First week of April	Public launch, announced to the 11K Instagram audience	Both

Launch is the start of the partnership, not the end of it. The Shopify account, the domain, the customer list and the catalog are Rosabella's property throughout, and remain hers if the partnership ends.

What's needed to start

Answers to these five questions turn this proposal into a signed agreement and a locked timeline:

- **What inventory system does the boutique use today?** — point-of-sale, a spreadsheet, or paper. This determines how the master sheet gets its first fill and whether ongoing sync can be automated.
- **Do your suppliers provide line sheets?** — brand line sheets (PDF or Excel with products, SKUs, prices, images) skip manual data entry, and tell us whether the scraping fallback is needed at all.
- **What is the target launch date?** — this proposal assumes the first week of April. Confirming the exact date locks the timeline.
- **How many Instagram posts go out per week?** — posting volume tells us how much shoppable content exists on day one and how to pace the new-arrivals email.
- **What are the budget constraints?** — the build costs nothing up front, so the question is vendor subscriptions, the optional add-ons, and whether a long-term 25% partnership is a structure the business is comfortable with.
